PHYSICAL MEASUREMENTS, EXPERIMENTS AND POWER TESTS.

OFFICE:
BRYANT BUILDING
55 LIBERTY ST.

New York, 1896

Dear Sir:

If in need of a professional expert to testify in patent suits and give technical advice, you may desire to employ one who is also a practical mechanic and experienced engineer.

I have been an engineer for twenty-five years; a civil engineer for ten years, and a mechanical and electrical engineer for the past fifteen years. I have designed and erected work on a large scale, including steam and electric light plants, and have conducted many power tests and experiments upon engines, boilers, electric lamps, dynamos, motors and other machines.

I have been with Mr. Alex. L. Holley (consulting and constructing engineer of iron and steel manufacturing plants); assistant to Mr. T. A. Edison; Chief Engineer of The Edison Electric Light Company of New York; Manager and Shop Superintendent of The Telemeter Company (manufacturers of electrical signaling and recording apparatus), and Engineer and Electrician of The Gibson Electric Company (manufacturers of storage batteries).

For several years past my time has been occupied exclusively in testifying and assisting counsel in patent suits, and making experiments and tests in connection therewith. I also investigate the utility of inventions and infringement of patents.

My charges are reasonable; inquiry in relation thereto is invited.

Yours truly,

Chas. L. Clarke
